NGUYỄN ANH TUẤN

Software Engineer Intern

0397190959 nguyenanhtuan9690@gmail.com portfolio: https://dev-portfolio-2026-ten.vercel.app/ Binh Thanh, TP.HCM

OBJECTIVE

Information Technology student with a strong interest in software development and full-stack web technologies. Seeking a Software Engineer Intern position to apply my technical skills, gain hands-on experience, and grow as a developer. My long-term goal is to become a Software Engineer capable of building scalable and high-quality software solutions.

SKILLS

Programming Languages	JavaScript, TypeScript (Basic)
Frontend Development	HTML5, CSS3, ReactJS, Redux Toolkit, Tailwind CSS, Responsive Web Design, React Router, Zustand
Backend Development	Node.js, Express.js, RESTful API , JWT Authentication.
Database	MySQL, MongoDB, PostgreSQL (Basic)
Tools & Platforms	Git, GitHub, Postman, VS Code, Vercel, Render
Soft Skills	Problem Solving, Self-Learning, Teamwork, Communication

PROJECTS

PICKLEHUB – Pickleball Court Management System **02-2026 - Present**

Full-Stack Developer | (Team size: 3)

Live Demo: https://picklehub-vn.vercel.app/
GitHub: https://github.com/cuongbam123/Pickleball-Court-Management-System
Developed a full-stack sports facility management platform for court booking, tournament management, POS operations, loyalty programs, and online payments.

Key Contributions:

- Built a full-stack system using React.js, Node.js, Express.js, and MongoDB following MVC architecture and Service Layer design.
- Designed and implemented a booking engine with concurrency control to prevent double-booking and ensure data consistency.
- Implemented role-based access control (RBAC) using JWT Authentication for Admin, Staff, and Customer roles.
- Developed a time-slot reservation system with automatic hold and expiration using background jobs (cron).
- Integrated VNPay payment gateways with secure webhook handling and idempotency mechanism to prevent duplicate payments.
- Implemented real-time booking and court status synchronization using Socket.IO to broadcast updates across connected clients.
- Designed tournament management system including registration, participant tracking, rankings, and results handling.
- Built POS module for managing products, orders, and inventory with booking integration.
- Designed invoice system combining court bookings and POS transactions into unified records.
- Optimized MongoDB performance using indexing strategy and structured audit logging for system tracking.
- Collaborated with team members using Git/GitHub with feature-branch workflow and pull request review process.

Technologies:

- ReactJS, Zustand, Node.js, Express.js, MongoDB, Socket.IO, JWT, VNPay, Git, GitHub.

EDUCATION

Ho Chi Minh City University of Transport **2022 - 2026**

Major: Information Technology

GPA: 3.2/4.0
